UNPACKING AND OPERATING INSTRUCTIONS

Remarks

The Bahama Pure is a premium large-size umbrella. Handle it with care during unpacking, assembly and subsequent operation. Correct handling of the umbrella ensures that your Pure large-size parasol will always remain in perfect condition.

1. Unpacking the Bahama parasol and assembly preparation:

1.1 Recommendation: Place the hardboard cylinder on two non-tilting trestles, alternatively, two chairs can be used.

1.2 Open the hardboard cylinder at the end marked with the black and white arrow sticker. Loosen all screws at the end of the cylinder. Make sure that another person is holding the closed end of the cylinder while you pull the wrapped umbrella out. Do so until the umbrella protrudes almost completely out of the cylinder. Your assistant then takes over the umbrella top at the open cylinder end to prevent the umbrella from slipping as it is pulled out.

©Bahama GmbH, Gewerbeparkstr. 34, D-51580 I Reichshof, Germany

1.3 Keep the hardboard cylinder including its lid stored in a safe place so you can use it again if necessary (long-term interim storage or transport of the large-size umbrella).

1.4 Please note the following points, before mounting

1.41 Do not remove the plastic packaging! (only after final erection/set up)

1.42 For safety purposes lift and carry the umbrella body. Under no circumstances drag it across the ground, an edge or other solids surfaces.

1.43 For interim storage of the umbrella it may only be placed carefully onto flat, edge-free surfaces (preferably with two upholstery pads such as foams, cushions etc.) Never drop the big umbrella or let it hit the ground!

2. Assembly incl. various types of installation devices

2.1 Each umbrella is equipped with the connecting components that correspond to the selected installation devices.

2.2 If you don't have a ladder for removing the plastic packaging and installing the top ball/plate post-erection of the umbrella, steps 3. 2 and 3. 3 should be carried out now. Once the top ball and plate are put on the umbrella make sure that you do not put it down under any circumstances! Please set it up right away. The membrane could otherwise become dirty or, worst case scenario, be damaged.

2.3 If you have chosen a permanent installation device, it should already be installed on site. (Please refer to the respective manuals for additional information pertaining to the various installation devices of the Pure model)

2.31 **Tipping Base Installation**
Loosen the screws of your Tipping Base and remove the cover plate. Keep the parts stored away in a safe spot. Now mount the aluminum hinge to the base. Proceed by aligning the umbrella's foot and the aluminum hinge. Then insert the pins through the hinges. Now you can fully erect the parasol. Finalize the mounting process of the connecting components by inserting and tightening the screws that were previously used for the cover plate.

2.32 **Cross Frame Installation**
Insert the umbrella vertically into the cross frame. After inserting your parasol, screw the lower part of the center pole to the mounting tube of the cross frame.

3. Procedure and opening after erecting the large-size parasol

3.1 The now erected umbrella should still be wrapped in its protective packaging (unless it has already been removed - step 2.2) !

3.2 Removal of protective packaging:

3.21 Place the ladder securely as close as possible next to the parasol.

3.22 Make sure your hands are clean or wear white fabric gloves.
This prevents you from getting dirt onto the new membrane.

Attention :
Under no circumstances should you open the plastic packaging with a knife, scissors or any other pointed object. Simply pull the packaging upwards.

3.3 The parasol accessories include a top plate, a plexiglass pane and a round plastic spacer. First put the top plate and then the spacer onto the thread of the plexiglass pane. Now you can screw everything together into the umbrella head.

3.4 Remove the Bahama safety strap so that the umbrella membrane starts to unfold.

UNPACKING AND OPERATING INSTRUCTIONS

3.5 Unlock and remove the cylinder lock inside the tension handle. Then unlock the cylinder lock inside the lifting ring. To relieve the lock you can press a spoke towards the center pole. Now press the spring snap button and slide the lifting ring down.

3.6 Pull the lifting ring down and the spoke ends outwards until the umbrella opens. If the membrane is equipped with a valance, make sure that the valance does not get caught.

3.7 Lift the tension handle up and push the lifting ring down. Now place the compression clamp on the hook. Then push the handle downwards for complete tensioning of the parasol.

3.8 After opening is completed, secure the umbrella by reinserting the cylinder lock inside the tension handle.

3.9 You can now fine-tune the umbrella's position inside its installation device.
In order to do so, loosen the 2 screws on the receiving sleeve and turn the opened parasol within (inside) the receiving sleeve. In so doing, you can align your umbrella with the front of a building, the edge of a roof or another large-sized parasol.
Once you have set the ideal alignment of the umbrella, secure its position by tightening the 2 screws again. Then check whether the ideal alignment has not changed again.

Recommendation:
For fine alignment of the umbrella roof edge, touch a spoke end at one corner of the roof edge. This facilitates the adjustment.

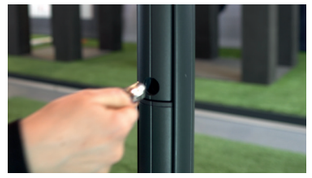
3.10 Now finally tighten all screws on the footing device. All screw connections must be checked for tightness from time to time.

3.11 Applies only to Pure Portable Stands.
Insert the Bahama cylinder lock into the locking block on the umbrella foot. Lock it up for full protection of the umbrella against unauthorized use.

4. Closing and securing the parasol

4.1 Unlock and remove the cylinder lock inside the tension handle.



4.2 Lift the tension handle up and push the lifting ring down. Now the compression clamp unhooks and the umbrella is relieved of its tension.

4.3 Grasp the lifting ring with both hands and slide it upwards.

4.4 For complete closing of the umbrella press the ends of two adjacent spokes inwards - towards the center pole.

4.5 Push the protruding tension handle all the way back into the center pole and reinsert the cylinder lock. Then lock-up both locks - in the tension handle and in the lifting ring, so that unauthorized persons cannot open the umbrella even if they remove the safety strap.

©Bahama GmbH, Gewerbeparkstr. 34, D-51580 I Reichshof, Germany

4.6 Very important:
After closing is completed, pull the fabric triangles outwards in a spiral and wrap the fabric triangles around the umbrella.

4.7 Place the safety strap around the canopy and tighten it. If the fabric triangles under the belt are not aligned smoothly, adjust the fabric triangles to prevent kinks in the membrane
ATTENTION: do not use wires, cords, or adhesive tape for fastening!

In principle, the following rule applies:
For wrapping, the textile membrane must be absolutely dry for at least 2 days (risk of stains)!

5. Miscellaneous, general manufacturer recommendations, etc.

5.1 The large-size parasol should not remain in a state between open & tensioned and closed & strapped! Otherwise the umbrella could be damaged by wind and other weather conditions. The membrane would also show the typical white stripes after just a few weeks, the so-called fluttering damages.

5.2 If the parasol is used with one of the original Bahama installation devices, your umbrella will have different levels of wind warranties depending on the model and footing device. You can find information about this in our Pure product catalog on pages 16-17. If there is no storm warning that exceeds the specified wind rating, it is recommended not to close the large-size umbrella. When doing so the membrane lasts and stays taut much longer.

5.3 If something is defective and you need a spare part for your Pure model, that's no problem at all. All we need is the serial number (SNR) of your parasol. It can be found on your umbrella.
